- C++, JAVA
- HTML, CSS
- JQuery, JavaScript
- SQL
- Bootstrap

Tools

- Visual Studio
- Sublime Text
- Netbeans
- Code Block

Summary

Web Developer Highly creative and multi-talented Website and with a lot of love for learning new technologies. Have worked in **Laravel**. I'm an excellent communicator and focus on using my interpersonal skills to build useful softwares.

Experience

Final Year Project - 09/2019 to 08/2020

Defenses Human Resource Management system

- For final year project I developed a system(Web application) that manage Human Resource in individual units of Pakistan Army and assigned them tasks and duties based upon their work periods and plan their future trainings based upon their trades and rank.
- A complete computerized Army HRMS with integration of Artificial intelligence that will generate all records of basic information, leave details, suggestions about future duties and training results related to an arm person.
- System will suggest future duties of arm persons to the Officer in charge. Through this system, we will evaluate trainings of the arm persons. An alert suggestion list will be shown on the portal daily.
- This portal will keep these records until unless an action performed. This whole data will help the Officer in charge to see the overall performance of the arm persons.

Education

Faculty of Sceince: **Pre-Engineering** -2014-2016-
Concordia College Kasur

Bachelor of Science: **Computer Science Systems** - 2016-2020
University of Lahore(3.75)

Other Project Skills

Surveillance system for Automatic bottle filling plant

Helps the researcher in a project of surveillance system to detect the level of each bottle which is passing through the conveyer belt by using image processing. Also help in the mechanical work in the project.
